

## Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus that allows the individual driving to be able to control the forklift without leaving the seat. They are constructed out of top quality materials and are meant to endure the most demanding operations and work surroundings. Side shifting models have the extra ability to laterally position the entire load or the arms in order to facilitate much more precise carrying and placement in a quicker and more effective method.

The blade pocket is quite unique and enables the individual operating it to be able to safely sway the blades into position without any worry of destroying the positioning cylinders. This allows the operator the alternative to be able to execute independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on available units.
