

Toyota Forklift Part

Toyota Forklift Parts - In the United States, Toyota Materials Handling inc., or TMHU, continues to be the top selling lift truck dealer since 1992. Proudly celebrating more than 40 years of performance, the Irvine, California established business presents a complete line of quality lift vehicles. Attributable to their reputation of excellence, reliability, and resilience, Toyota remains prevalent in this competitive market. Quality is the cornerstone of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S.A are manufactured here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant improvement, and its environmental methods. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift vehicles emit 70% fewer smog forming emissions than the current federal EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

The head of Toyota Material Handling, U.S.A., Brett Wood believes that TMHU's achievement comes from its commitment to manufacture high quality lift vehicles at the same time as providing superb customer assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." • TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's leading lift truck provider and is among the magazines prominent World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota's parent company, Toyota Industries Corporation, has imparted an outstanding company ideology towards environmental management within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability cannot be matched by other companies and unquestionably no other materials handling producer can thus far rival Toyota. Environmental responsibility is a key aspect of company decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift vehicles. Yet one more reason they remain a leader within the industry.

Toyota originally released the 8-Series line of lift vehicles in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission values, and California's more environmentally friendly emission standards. The end creation is a lift truck that creates 70% less smog forming emissions than the present Federal standards allow.

Also starting in 2006, collectively with the Arbor Day Foundation, Toyota added to its dedication to the environment. To this day more than 58,000 trees have been embedded in the ground throughout state forests and neighborhood parks that were damaged by fires and other ecological causes. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the U.S.

Toyota's lift vehicles provide enhanced output, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also known as "SAS"•, helps decrease the possibility of accidents and accidental injuries, in addition to increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability senses several elements that might lead to lateral insecurity and possible lateral overturn. When any of those factors are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This transitions the lift truck's stability trajectory from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding strength.

The SAS systems were originally adopted on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped thrust Toyota into the lead for industry safety standards. Now, SAS is utilized on practically every new internal combustion models and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with obligatory operator instruction, overturn fatalities across all designs have decreased by 13.6% since 1999. Furthermore, there has been an overall 35.5% drop in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's standard of excellence reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training curriculum to help clients meet OSHA standard 1910.178. Education packages, video lessons and a variety of materials, covering a broad scope of matters-from individual safety, to OSHA regulations, to surface and cargo conditions, are offered through the dealer network.

Ever since the transaction of its first lift vehicle in the U.S. to the construction of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has sustained a solid presence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are built in the United States.

Situated in Columbus, Ind., the Toyota Industrial Equipment Mfg. campus equals 998,000 square feet of facilities spanning 126 acres. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service components, with the whole investment exceeding \$113 million dollars.

The new NCC was designed to function for TMHU clients and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an section for live merchandise demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its founder, Sakichi Toyoda, in 1867, and lastly a training center.

TMHU has 68 sanctioned industrial equipment dealers, along with 189 dealership locations all through the United States, offering the most comprehensive and inclusive customer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, components, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall consumer satisfaction.
